

COLOSTRUM SUPPLEMENT

Colostrum is essential for lamb health and productivity, providing vital energy, nutrients and immune protection during the critical early hours of life. However, natural variation in maternal colostrum in quality, volume or timing can leave some lambs at risk of inadequate intake. In these situations, colostrum supplements offer a practical and effective solution to help producers support lamb health and development, by filling nutritional and immunological gaps during the most critical window for survival and growth.

NEO Lamb GOLD™ Supplement is a high quality 100% naturally-derived product that is designed to be fed alongside maternal colostrum when additional volume or quality is required. It can be used to extend colostrum supply for twin or multiple lambs, enhance maternal colostrum when quality is insufficient or during busy lambing periods when consistent supplementary feeding helps maintain robust lamb rearing protocols.

NEO Lamb GOLD™ Supplement is made from high quality, spray dried natural bovine colostrum. It delivers a balanced blend of bovine colostral proteins and fats, designed to complement maternal colostrum and support the nutritional needs of lambs during early development.

NEO Lamb GOLD™ Supplement is produced under strict quality assurance standards ensuring consistency, safety and hygiene in every batch. The advanced spray

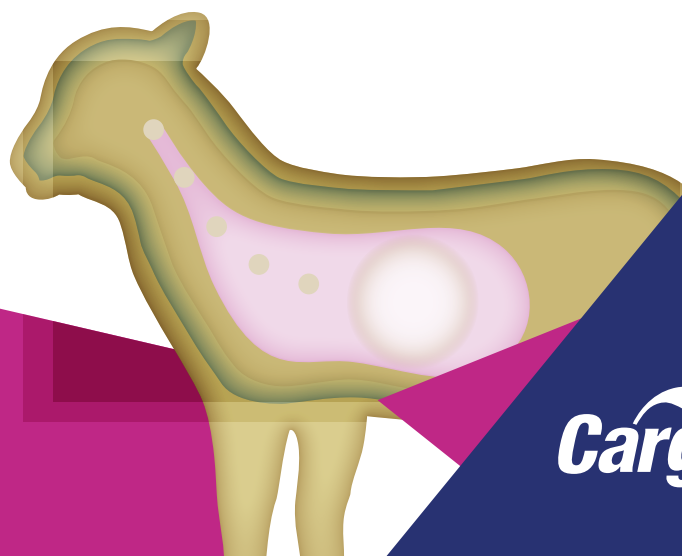

drying technology preserves key nutrients and provides excellent solubility. Both raw ingredients and finished products undergo rigorous testing, offering reassurance to producers and helping maintain confidence in lamb rearing protocols.

NEO Lamb GOLD™ Supplement is a flexible and convenient top up option to complementing maternal colostrum that is easy to mix and feed. It supports consistent lamb rearing practices and is a reliable and safe alternative to pooling colostrum from multiple ewes that may increase the risk of disease transfer, inconsistent quality and hygiene issues. This makes it an ideal solution for producers aiming to standardise protocols and safeguard lamb health during busy periods.

Whether it is used to safeguard against poor quality colostrum, low supply or delayed feeding, **NEO Lamb GOLD™** Supplement supports improved immunity, health and overall wellbeing in young lambs.

NEO Lamb GOLD™ Supplement provides producers with greater confidence in lamb performance and reinforces best practice around colostrum management laying the foundation for future lifetime productivity.

Cargill

COLOSTRUM SUPPLEMENT

Nutritional objective:

Supplement/enhance or replace maternal colostrum.

Characteristics:

- 100% naturally derived
- High level of dairy fats, crucial energy source
- High level of colostrum proteins
- Extremely palatable
- Easy mix

Composition:

Full-fat cream powder, Bovine colostrum.

Analytical constituents: (% or per kg)

Crude protein	24.0 %
Crude fat	37.5 %
Ash	0.8 %

Storage:

Store between 10°C and 25°C out of direct sunlight, in original container.

Keep out of the sight and reach of children.

Key components to successful use of a colostrum supplement:

- Clean mixing and feeding equipment
- Ensure water temperature is at 40°C
- Measure colostrum powder and water
- Mix with a whisk until completely combined for 30 to 60 seconds
- Feed the appropriate amount of colostrum based on immunity goals

Instructions for use:

For oral administration to newborn lambs as soon as possible. Best practice is within 2 hours after birth and maximum 6 hours after birth. Reconstitute in water (40°C) to form a palatable solution for oral administration.

Supplement Maternal Colostrum:

Mix 50g (4 scoops) of **NEO Lamb GOLD™** with 100ml of warm water (40°C) to make 150ml of ready-to-feed colostrum.

Repeat with another 50g (4 scoops) within 6-8 hours of the first feed to provide an energy source.

Enhance Maternal Colostrum:

Mix 50g (4 scoops) of **NEO Lamb GOLD™** into maternal colostrum to increase the Brix reading by 2%.

Maternal Colostrum Replacement:

Mix 100g (8 scoops) of **NEO Lamb GOLD™** with 150ml of warm water (40°C) to make 250ml of ready-to-feed colostrum.

Repeat with another 100g (8 scoops) 6-8 hours later of the first feed to provide complete replacement.

PACK SIZES:

1kg 20 feeds
2kg 40 feeds
